

IS-PHYS Lab

Title of the Report

Name: [Your Name Here]

Partner: [Partner Name(s) Here]

Instructor: [TA Name Here]

Lab Instructor: [TA Name Here]

Date: [Date Here]

Abstract

[Write your abstract here after completing all other sections. 250 words or fewer.]

****What did you do?****

****Talk about your results?****

****What do these results tell you?****

1 Background

1.1 Purpose of the Experiment

[Why conduct this experiment? 1–2 paragraphs]

1.2 Physical Principles

[What is the physics behind? 1–2 paragraphs]

1.3 Experimental Method

[How are you going to do it? 1–2 paragraphs]

Figure 1: *Experimental setup showing [describe your setup]*

2 Data

[Paragraph describing the data contained in the tables below]

Table 1: *Raw experimental data measurements*

x (m)	V (V)
0.0044151	0.0030871
0.0021633	0.0021343
0.0003600	0.0018642
0.0023831	0.0013287

Note: Original raw data sheets are attached at the end of this report.

3 Results and Discussion

3.1 Calculations

[Description of analysis performed]

Equation used:

$$y = mx + b \quad (1)$$

Sample calculation:

For the first data point where $x = 0.0044151$ m and $V = 0.0030871$ V:

$$\begin{aligned} y &= mx + b \\ &= (0.5)(0.0044151) + 0.001 \\ &= 0.0032076 \text{ V} \end{aligned}$$

Figure 2: Voltage vs. Position showing linear relationship

3.2 Analysis of Results

[Discuss what the graphs and calculations show. Interpret the slope, intercept, or other relevant parameters.]

4 Conclusions

[One-paragraph summary explaining your principal results. Address:]

- What the experiment demonstrated
- How well the results matched theoretical predictions
- Sources of uncertainty or error
- Key takeaways and understanding gained

Appendix: Raw Data Sheets
